# Exceptional quality

## Manufacture in Europe

Our hot tubs made in Europe in a next-generation factory using robotic production technology with extreme precision are subject to systematic testing.

To achieve the highest level of warranty, we use the best components in all production stages.

## 100% recyclable materials

The basis for ecological safety of our hot tubs is 100% recyclable Italian material GreenShield, which completely eliminates any risk associated with the use of outdated fibreglassing technology and the chemical substance styrene.

## TÜV standard

Thanks to our modern production and best quality components, all our products have received the TÜV Rheinland certification. This independent certification provides an international guarantee of quality.

Certified by an independent laboratory approved by TÜV in terms of 20 control criteria, some of which are:

- Resistance to high temperatures, temperature fluctuations and chemicals
- Material resistance, structural stability, resistance to pressure
- Optimized design eliminating the risk of leakage
- Meets electrical safety standards

**Only 5% of hot tubs on the market are TÜV certified!**

# Warranties

Thanks to the use of the highest quality of material in all stages of production, we can offer the best warranties on the market and a perfect delivery time.

The modern design of the hot tubs allows easy accessibility in case of the need for technical interventions.

## Carefully selected materials

The shells of Hanscraft hot tubs are made of the best quality acrylic sheets, an exclusive material that gives them exceptional durability and reliability. The patent for the ABS-PMMA acrylic sheet makes it possible to combine the resistance of acrylate with the strength of ABS, reinforced with 2 layers of high-density Greenshield insulation.

Thanks to these first-class materials and rigorous testing, there is no doubt about the long service life and reliability of each hot tub.

## The best materials for hot tub paneling

The outer panels, which thoroughly protect Hanscraft hot tubs, are designed using patented processes to withstand bad weather, UV radiation, high temperatures, scratches, shocks and solvents. They are easy to maintain and are made of high-quality construction material, which is also used for terraces and facades.

## A wooden structure tested by time

The wooden structure treated with products according to class 4 is highly resistant to water, temperature fluctuations and the harshest climatic conditions. The flexibility of the wood reduces noise caused by vibrations and ensures reliable stability.

## Multi-level insulation for significant energy savings

Hanscraft hot tubs are designed to allow you to enjoy hydrotherapy in complete tranquility.

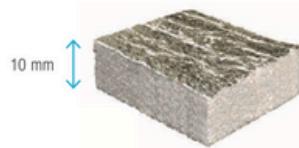

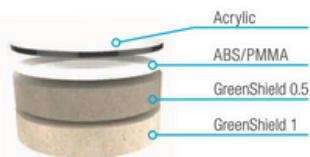

Your spa is the result of innovative technologies aimed primarily at reducing energy consumption.

Like every part of our hot tubs, the insulation is uncompromising. Whether it's the shell, paneling, thermocover or other technical elements, we have created a number of proven technical solutions saving up to several kilowatts per year.

### Optimal insulation

#### Tub

Double GreenShield layer insulation is much more effective and durable than expensive foam insulation, and it also allows for better resistance of the tub.

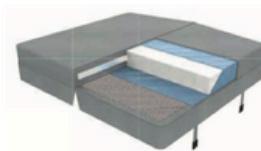

#### Paneling

All the panels and the bottom are coated with a 10 mm thermoshield PVC foam, which allows insulation of the hose system and other technical elements of the hot tub.

#### Thermocover

The thermocover of Hanscraft hot tubs designed from the highest quality materials allows you to maintain an ideal water temperature.

#### ABS base

The thermoformed ABS base provides an impermeable barrier against heat loss and rising moisture coming from the ground.

### 3 independent pumps

In order to achieve less noisy operation and to be able to control the energy consumption of the switched off hot tub, we decided to separate the massage and circulation pump.

Each pump switches on with a specific jet selection. The intensity of the massage therefore remains the same whether you are alone in the hot tub or there are several people.

The circulation pump is set for filtration and heating. This allows all pumps and heater running at the same time. This solution enables both a significant reduction in noise when the hot tub is not in use and lower electricity consumption.

#### Blower

Our hot tubs are equipped with a blower for even more intensive hydrotherapy. The preheated air is driven via air jets. This makes the massage even more comfortable as it reduces the feeling of cold in the case of low outdoor temperatures. The preheated air also prevents the water temperature from dropping during the massage.

**Massage pump**  
For premium OKA and HC design hot tubs, we always use 2 single-speed 2.2 kW pumps (with exception in hot tubs OKA1, OKA2 and HC8, which have only 1 single-speed pump) and one 200-400 W filtration pump. The reason for this is to guarantee their longer service life and, last but not least, to ensure an optimal massage with a constant flow in all places.

#### Circulation pump

There are several advantages to installing separate circulation pump:  
- Significant reduction in hot tub noise in standby mode  
- Less energy consumption than hot tubs that uses a dual speed pump for water circulation  
- Allows further extension of the service life of massage pumps

# Comfort for health

## Benefits of hydrotherapy

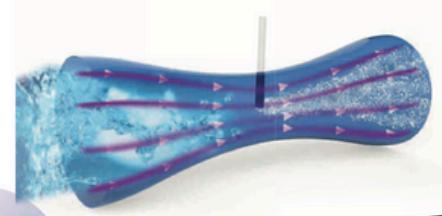

Hydrotherapy is very beneficial for body and soul. It has relaxing and healing effects. It can thus relieve muscle tension and joint pain, help regenerate the body and blood circulation, eliminate toxins, reduce stress and improve sleep quality. The jets are arranged to target specific areas of the body.

Some models have a tasteful and, most importantly, pleasant waterfall, which creates a relaxed atmosphere.

## Venturi effect

Thanks to the Venturi effect, you can choose between an intense and a gentle massage. The adjustment knob (air volume control) allows you to precisely adjust the air to water ratio of the massage jets.

## Hydromassage jets

The CMP jets in Hanscraft hot tubs provide a great variety of massages. The hot tubs are equipped with 4 types of stainless steel jets of 3 different sizes. All benefit from an adjustable Venturi effect and added air to the hydromassage jets. The jets are perfectly arranged to target specific areas of the body.

■ Unidirectional movable jet

■ A simple rotating jet that draws small circles and moves towards a specific part of the body

■ Bi-rotational jet for an intensive massage of a large part of the body

■ Unidirectional rotating jet that sprays a pulsating stream of water for an intensified massage

## Respecting the body from an ergonomic point of view

The size of each seat was thoroughly studied according to European standards. The space for each hot tub seat is created to best copy the contours of your body and to make sitting in it, including the massage, comfortable.

## An experience for all the senses

## Relaxing atmosphere

For those who love peace and relaxation, our hot tubs are equipped with a backlit waterfall. Let yourself be quietly carried away by the sound of running water and forget the concept of time.

## Atmosphere full of colors

The play of lights (with LED lighting) provides the user with all the beneficial effects of chromotherapy. This natural method of projecting colored lights on the skin helps to maintain the proper functioning of the body from a physical and mental point of view. Chromotherapy can have a positive effect on fatigue, depression and anxiety, and it is a suitable adjunct to hydrotherapy.

## Telescopic skimmer for crystal clear water

Don't they say that the best accessories are those we don't even notice? The telescopic skimmer technology allows perfect water care regardless of the number of people in the hot tub. While fixed skimmers become clogged as soon as the water level rises too high and thus no longer collect dirt from the surface, a telescopic skimmer is always ideal for collecting foam from the surface of the water.

10

Audio Bluetooth

Subwoofer

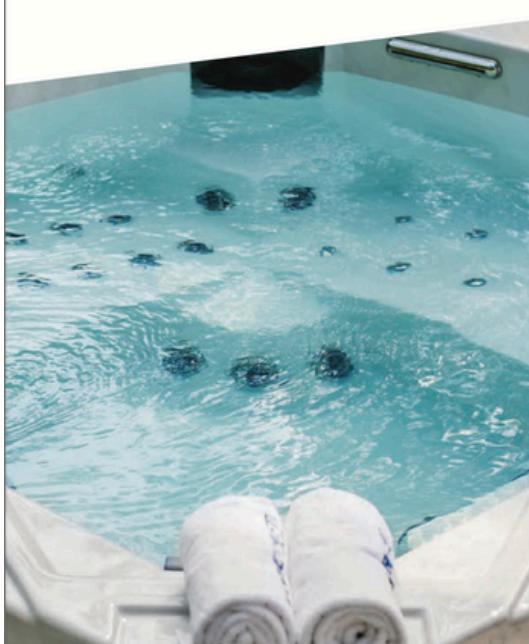

## Complete audio set

HANSCRAFT OKA design hot tubs even include a quality audio system for a moment of absolute relaxation. The system is controlled with your smart phone or tablet via Bluetooth and is also equipped with a subwoofer to make your experience even more intense. Listen to your favorite music in the best hot tub. The audio system is available in HC design hot tubs for extra charge.

## The importance of safe water

Because your satisfaction also depends on the quality of water in your hot tub, at HANSCRAFT we do our best for its safety. In hot tubs, where the elevated water temperature contributes to the spread of bacteria, effective maintenance is essential. This is why we equip our hot tubs with a dual, completely natural water disinfection system that respects your skin. This also reduces the use of chemicals.

## Quality water for health

### Dual equipment for 100% natural water treatment

#### Ozonator

It ensures water purity by converting oxygen to ozone.

- 100% natural method
- Reduces the amount of chemicals needed
- Helps destroy bacteria, viruses and algae
- Oxidizes pollutants, undesirable odors and limestone
- Does not require charging because it uses oxygen from the air

#### UV lamp

Disinfects water using type C Ultraviolet Rays (UV).

- Allows clean and clear water
- 100% natural
- Destroys microorganisms, bacteria, algae
- Reduces the amount of chemicals needed

## Beyond-standard accessories

### Extra insulation

If extra insulation is chosen, the wooden structure of the hot tub is filled by 40 mm thick thermoshield PVC foam. This ensures protection of technical components and hoses against extreme cold. This equipment is mainly offered in Scandinavian countries, but it also saves money on power consumption.

### WIFI interface

Make your life easier with the possibility of operating the hot tub's control panel via a WiFi interface. Change the temperature or check the correct operation of the hot tub: all this can be done in the blink of an eye on your smartphone even from the other side of the world.

### Control panel Spa Touch

This is standard equipment of the OKA design hot tubs, however, but this Spa Touch touch control panel can be installed on a range of HC design hot tubs on request.

### Microsilk technology

This is a device that produces billions of fine bubbles rich in oxygen that hydrate and regenerate the skin in depth by removing impurities, smoothing it out and neutralizing free radicals. This cosmetic procedure provides relief for people suffering from skin diseases such as eczema and psoriasis.

### By Pass connection

This variant allows independent filtration or heating of the hot tub, e.g. using a sand filtration or a heat pump for swimming pools, thus reducing electricity consumption.

### Preparation for embedding the hot tub

Do you want to embed your hot tub in a designated area? We offer you the option of ordering a hot tub without external paneling.

### Cabinet LED light strip

Discover the magic of LED lighting and create the perfect atmosphere. Several LED light strips placed under the side panels of the hot tub will create the right atmosphere for relaxation.
